ABEERA IQBAL

Professional Summary

Motivated and detail-oriented SIEM and Cyber Defense Analyst with hands-on experience in SOC environments, specializing in QRadar, Wazuh, threat detection, log analysis, and incident response. Skilled in analyzing Windows, Linux, Sysmon, and network logs to identify threats such as malware, privilege escalation, and lateral movement. Adept at developing SIEM rules, creating detection logic, performing event correlation, and mapping alerts to MITRE ATT&CK. Passionate about strengthening organizational security by improving detection accuracy and SOC efficiency.

Technologies & Skills

- **SIEM Tools:** IBM QRadar, Wazuh
- **Security Monitoring:** Sysmon, Windows Event Logs, Linux Logs, Network Traffic Analysis
- **Threat Detection:** Rule Creation, Sigma Rules, Correlation Rules, IOC Investigation
- **Programming:** Python, Java
- **Web/Platforms:** WordPress, Oracle SQL, MS Office
- **AI Development:** LLMs, Prompt Engineering, AI Workflows
- **Integration:** API Integration, Third-Party AI Services
- **Automation Systems:** Agent-Based Workflows, Process Automation
- **Soft Skills:** Communication, Collaboration

Work Experience

DWP Groups
SOC Analyst
Sep 2026 – Current

Responsibilities:

- Monitored and analyzed security alerts and events using SIEM platforms such as IBM QRadar and Wazuh to identify potential security incidents.
- Performed Level 1 alert triage, investigated suspicious activities, and determined the severity and priority of security events.
- Analyzed Windows, Sysmon, Linux, and network logs to identify indicators of compromise (IOCs), abnormal behavior, and potential security threats.
- Investigated failed login attempts, unusual authentication activity, malware-related alerts, and suspicious network activity as part of daily SOC operations.

- Correlated security events and investigated offenses using QRadar AQL, CRE rules, QIDs, and DSM information to support incident analysis.
- Used MITRE ATT&CK techniques and security indicators to assist in identifying and classifying suspicious activities.
- Performed initial incident investigation, documentation, escalation, and follow-up according to SOC procedures.
- Created and maintained Sigma and Wazuh detection rules, decoders, and parsing configurations to improve security monitoring and alert visibility.
- Developed Python automation scripts to automate repetitive SOC tasks, log processing, data analysis, and operational workflows.
- Troubleshot SIEM alerts, log sources, parsing issues, and monitoring configurations to maintain effective security visibility.
- Documented investigation findings, evidence, actions taken, and recommendations for escalation to SOC Level 2 / senior analysts when required.
- Continuously monitored security events and supported timely detection, investigation, and response to potential security incidents.

Cybus Solutions
Python Developer
May 2026 – Sep 2026

Responsibilities:

- Developed and deployed Python automation scripts on servers to streamline daily operational tasks and reduce manual workload.
- Automated log collection, parsing, and monitoring processes for improved system efficiency and faster analysis.
- Created scripts for alert handling, data processing, and workflow automation within security operations environments.
- Managed and executed server-side scripts to ensure smooth automated system performance.
- Integrated Python automation with SIEM platforms such as QRadar and Wazuh for enhanced monitoring and incident handling.
- Optimized existing processes through automation, improving operational accuracy and response time.

- Performed troubleshooting, debugging, and maintenance of automation scripts and server-side processes.

Evionous Technology
SIEM / Cyber Defense Analyst
March 2025 – February 2026

Responsibilities:

- Performed continuous monitoring and alert triage using QRadar and Wazuh.
- Analyzed logs from Windows, Sysmon, Linux, and network devices to detect suspicious behavior.
- Write Regexes for fields and raw logs parsing.
- Designed, implemented, and tuned detection rules including Sigma-based logic.
- Developed Wazuh decoders and rules for accurate log parsing and normalization.
- Conducted event correlation and alert investigations using MITRE ATT&CK.
- Created and optimized dashboards for real-time threat visibility.

E-Bryx – Arfa Tower
Security Operations Center (SOC) Intern
Oct 2024 – March 2025

Responsibilities:

- Supported SOC workflows including monitoring, triage, and alert analysis.
- Assisted in analyzing Windows logs, Sysmon logs, and network activity to identify threats.
- Supported initial incident response and escalation processes.
- Helped configure dashboards, event correlation rules, and conducted threat intelligence research.

Projects

- SIEM Management System
- Remote Access Trojan (Python)

- Log Parsing Automation using Python
- AI Virtual Dress Try-On System (Final Year Project)
- INFINITE – Smart E-Commerce Platform
- RAG-Based Chatbot System
- Mind Mesh (Crowdsourcing Platform)

Education

Bachelor of Science (B.S.) in Information Technology
Minhaj University, Lahore — *2022–2026*

Developer Certificates

- Cyber Defense Analyst
- Security of Operation Center Analyst (SOC)
- Python Programming
- Database Administration – Oracle SQL
- Java
- Pitman English Certification
- WordPress
